---

MIDI In/Out The instrument has no MIDI I/O or MIDI Learn functionality. Supported Emulations The instrument has no support for the following software emulations. References Category:Acoustic bass guitarsQ: Get value from multidimensional array I have an array of objects that I am trying to fetch a value from. public static Type type; public void method1() { System.out.println(Arrays.toString(type)); type[1][1].class.getName(); } public static void main(String[] args) { new Call(new Object() {}, new Object() {}).method1(); } I get an array like this: [[Ljava.lang.String;@c0aa75a, [Ljava.lang.String;@278043b0, [Ljava.lang.String;@7e9f3a6, [Ljava.lang.String;@f4a9548, [Ljava.lang.String;@a26b4d0, [Ljava.lang.String;@bf0bd93 I am trying to print the class name, I've tried type[1][1] but get an error: Cannot invoke method getName() on null object. Any ideas? A: The array is containing objects, not arrays, so you can't use type[1] - it's not even an array. type[1][1] is trying to get the type class from the object at position 1, 1 in the array. You have to use type[1][0].getClass().getName() instead to get the class name. Q: Regexp to match only two characters I need to make a regular expression to match a string that can only contain the characters A, B, C, D, E, and O. This is what I have so far: ^(A|B|C|D|E|O)\$ I'm not sure how to make the string contain only one of the characters at a time. A: You can use this regex: ^(A|B|C|D|E|O) 2d92ce491b
