ARABIC SF-36 Cite this Article: Licaforsu, P., Farooq, M. A., AlGhamdi, A. M., & Al-Azm, F. J. (2020). This article is a stub. You can edit this stub to add missing content and contact the community about it. 5.0,57.0, ARABIC ISRTRON© ARABIC SF-36v2 sf-36 questionnaire arabic version pdf download The SF-36 Version 2 (SF-36v2) was developed by Mark Ware [38] and then further validated by the developers of the original SF-36 including Quality Metric Inc. (QMI), under the supervision of Professor Robert W. The SF-36v2 is a generic quality of life instrument that has been translated and adapted for use in many languages. Each of the eight subscales in the SF-36v2 consists of two to four questions. The SF-36v2 has been developed for all types of patients across a wide range of conditions and populations. It is currently used in more than 100 countries. The SF-36v2 can be used as a generic and a disease-specific instrument. The SF-36v2 is used to measure physical and mental health, rather than discrete diseases. The generic SF-36v2 scale is scored in the same manner as the original SF-36. The SF-36v2 is generic in nature, which means that it can be used to measure health outcomes in a wide variety of different settings and populations. The eight health dimensions are scored from 0 to 100, and a higher score indicates better health-related quality of life. Each dimension is calculated from one or more questions that measure one aspect of health. The eight health dimensions and the related questions

---

are: Physical functioning (PF) In the past week, how much of the time did your physical health or emotional problems interfere with your normal work (including both work outside the home and housework)? Role-physical (RP) In the past week, how much of the time was your physical health or emotional problems interfering with the way you normally spend your time (e.g., work, school, family or social activities)? Bodily pain (BP) In the past week
