the Last of Us Sony is taking the wraps off of its next-generation PlayStation 4 and it's called the Playstation 4 Pro, which replaces the current home console. It's also pretty damn expensive. The new PS4 Pro is going to come with 8 GB of memory, so you can store up to an additional 1.6 TB of content. It also comes with a further 1 TB of hard disk space. Both consoles are built to a more compact form factor, with the PS4 Slim also being the lightest console ever made, weighing only 0.52 kg, or around 1.2 pounds. The new Playstation 4 Pro will sport a custom AMD processor that will offer 4.2 teraflops of graphics performance. It will also be the first console to feature AMD's new GCN architecture, which gives it a leg up on gaming performance. The new PS4 will also sport a new power supply system. PS4 users will be able to utilize both the hard drive and solid state drive, instead of just one or the other. Both consoles will also support 4K Ultra HD resolution. It's going to be priced around £399 in the UK. Sony unveiled both the PS4 and the PS4 Pro at an event in New York today. It has yet to be revealed whether or not these new consoles will be available outside the US, although the news is already making its way around the web. The new PS4 Pro will be available later this year. For more on the new consoles from Sony, check out our previous coverage on the story. A new pattern of chronic urticaria: treatment with omalizumab.
