YTS Movie .Asynchrony of ovulation and subsequent embryo mortality in the bitch. The main hypothesis of the present study was that the asynchrony of ovulation in the bitch can be a cause of abortion in pregnancy. In order to test this hypothesis, 70 bitches with irregular cycles in the first half of the reproductive period were treated for anovulation with different substances: (1) dinoprost (Apo-Prostaglandin F2alpha) 5 mg for 14 days, (2) medroxyprogesterone acetate 5 mg for 14 days, (3) a mixture of cyclogest 20 mg (Estrumate) and dinoprost 5 mg for 14 days. In addition, 34 bitches with normal ovulatory cycles were treated with dinoprost 5 mg for 14 days. The ovulation was controlled with ultrasound and was diagnosed by the presence of a follicle greater than or equal to 30 mm in diameter and/or an ovum present at ovulation. The ovulation rate in bitches treated with dinoprost was not significantly different from the ovulation rate in bitches in the control group (6/7 or 86.6% and 8/9 or 88.8%). After treatment, bitches that did not ovulate were euthanized at the expected day of ovulation. However, embryos were still collected from bitches with an ovulation rate of 0/7. To control possible infections, a further two groups of bitches were treated with: (1) medroxyprogesterone acetate 5 mg for 14 days and (2) a mixture of cyclogest 20 mg and dinoprost 5 mg for 14 days. The ovulation rate was 0/11 in both groups. The embryos were collected and cultured. There was no difference in the culture rate (0/3) between the treated and the untreated group. The results indicate that ovulation can be induced by dinoprost in bitches with irregular cycles without a reduction in embryo survival.Q: reading number from text file and print to console I am creating a program which reads a text file that contains
