
Sqlsupport Msi Download 2008 R2 19

I can't install Sqlserver 2008 on my laptop. During installation, the extraction of files is completed first, and during installation, "SETUP". "Installation could not be completed" at the end of installation. Is there a way to have it installed and get it to work? Is there any other tool for this This happens when you try to upgrade your 2008 server from 2008 R2. In case you need to restore 2008 R2 and install it back on a 2008 server, make sure you remove the 2008 R2 version from the repository and simply download the 2008 server version to install it again You will need to find
