VBA As with other applications of the Autodesk application suite, AutoCAD has a native version of Visual Basic for Applications (VBA). This enables users to code custom macros in VBA, and run them from the ribbon interface. This functionality was initially made available to certain AutoCAD users via the Autodesk Exchange Apps platform. Subsequent to the 2013 release of Autodesk's Excel Auto-update function, the functionality to run VBA code from

the ribbon interface was also added to the 'Standard' edition. The VBA scripting language was released to the public in AutoCAD 2014. Like many CAD-based software packages, AutoCAD can import and export file formats from other CAD systems, including MicroStation and Navisworks. The imported data must be compatible with the VBA scripting language. Visual LISP AutoCAD has supported Visual LISP since AutoCAD 2000. Visual LISP is a scripting language that was designed to simplify the creation of complex macros. Originally intended for use by AutoCAD users, this feature has been released to the general public in AutoCAD 2011. This provided Visual LISP functionality to the 'Standard' edition users. Visual LISP scripting was removed from AutoCAD 2014. A strong US economy and increased economic confidence for most other major economies seems to have effectively counteracted the weakness of the Chinese economy, with the exception of the consumer sector and financial markets, which remain vulnerable. If and when the effects of the trade war start to be felt, the weakness of the global economy could start to show up in China, which could put downward pressure on Chinese growth as it seeks to soften the effects of the trade war. In a very real sense, the current “Trump trade” is leading to a “Chinese slowdown”, an effect that is not easy to assess, but it is beginning to show up. US midterm elections – 2018 Interest rates and inflation remained the main story for the US midterm elections, with the US Federal Reserve raising rates, inflation expectations rising, and the dollar strengthening. The markets have reacted very positively to the Fed rate-hike and to the strong economic data released this summer. This is unlikely to change, and as such, market expectations of Fed rate hikes through the year appear quite high. The fiscal stimulus that has been provided to the US economy by the Trump administration has so far been largely ineffective in terms of boosting growth, but appears to have a stabilising effect on the US economy and market expectations of the direction of US policy. Inflation, however, is still tame. The Fed has focused on strong US economic growth and not on rising inflation and expectations. Inflation expectations are expected to rise, but only gradually. The impact of the trade war on the US economy and markets remains to be seen. While the most important impact seems to be the ongoing decline in US exports, the impact on import growth and inflation could be significant. The US economy is far from overheating
