KEYMACRO is a record macro utility. It is aimed at creative people who want

to edit a video at the maximum speed. In a nutshell, it's a video creator. It lets you record a movie with only a few keystrokes, even though it does not use a "hotkey" concept. Special features: You can make use of keyboard shortcuts to speed up the recording process. Using "Shift" and "Ctrl" keys enables you to

record different scenes. However, when you hold down one of the buttons, the recording speed will be automatically set to maximum. A ".VOB" video file is the output for every recording. For more information, you can press the "About" button. It is set in the menu bar with a green icon. Creative and intuitive interface

KEYMACRO will let you record a video at a maximum speed. You cannot record something for ever as it uses the stop key. However, it does not use any hotkeys as it does not require any memory. Just click on the "record" button, and you are good to go. So far, this might sound very strange. However, the way you use

KEYMACRO will be intuitive at the first glance. It uses standard interface elements to present all options at the same time. Your space will be maximized, and you can use the right, left, up and down buttons to move around the interface. To start a recording, you just need to press a key, and then everything will start

working as it should. You can stop recording at any time by hitting the spacebar. Furthermore, to make the interface even more intuitive, buttons are used to present all settings. Instead of typing a long "keystroke", you can now simply use the button that corresponds to the configuration you need. For example, if you want

to record a sound for a section, then you would just click on the microphone button. In conclusion As mentioned, this keystroke recorder is a "creative" utility. It aims to make things fast and easy. Once you get used to the idea of a very intuitive and easily manageable interface, you will find your creativity booming. If
