1.1. Transparent Layers, Shadows, and Gradients Transparency refers to the fact that you can see through an image. When you add transparency to an image, you make parts of that image visible. Think of using the color picker tool to add a yellow drop shadow to a black background. See the images below: You can see through the black background, and the white drops of the shadow are clearly visible even though they blend in with the background. When you add transparency to images, it is important to keep in mind that they will never be completely opaque. The white boxes at the bottom of the image are examples of transparency on a white background. In that example, they are completely transparent. A gray background and blue drop shadow: A white background and black drop shadow: Suffice it to say, you should always Photoshop away from the edges. 1.2. Water Effects in Photoshop 1.3. Filters Filters are perfect when you want to be creative in creating different views or textures from your images. You can use them to alter the colors of your image, blur your image, or even create a water effect in your image. There are many different filters available to use and create all kinds of different effects. The filters are like little self-contained changes to your image. In addition to adding effects, you can also define exposure, contrast, and exposure. There are two ways to apply a filter. You can either press or click on the filter to apply it, or you can use the Filter effect. 1.4. The Importance of the Color Picker The color picker allows you to add a new color to the image. By using the color picker, it is a very easy way to change the color of pixels in your image. For example, if you want to apply the color green to a specific area of your image, you can use the color picker to select the color green. To view the color picker, open the image that you want to apply the color to. Click on the color picker tool on your tool bar. You can select multiple colors, but only one at a time. Colors are added to the image by clicking

This area is a stark demonstration of Canada's public broadcaster's ongoing efforts to develop a renewed sense of identity in the digital age. Much effort has gone into redoing the CBC's web site. There are new tags, new images, and new videos. Some things are the same, such as the video page featuring Canadian celebrities and politicians. Other things are completely new, such as the "Meet the Bear" page, which advertises a new sitcom for CBC(tv). Look at the new right side of the page and you can see many of the same fonts used before. But the old (left) side is grey, and static. They tried to make it look new and exciting, but in the end they didn't succeed. The new site feels like an afterthought. A little bit messy, a little bit dull, and a little bit off. The tag cloud on the right side is fine and it's a nice visual, but the whole thing feels slapdash. As if they didn't have the time or money to do it right. Don't get me wrong. The left side is superb. The video page is still there, and so is the "Meet the Bear" page. This is the real strength of the site. For instance, here is a video of Justin Trudeau talking about Canadian Prime Minister Stephen Harper: Canadian Citizen Media Conference Promote yourself and your ideas: Join a community of Canadian digital media creators for a free, one-day, workshop focused on learning new skills as a content creator. CBC ALBERTA Their web site is well designed. It is a triumph of branding. It has done the job it was supposed to do in becoming the hub of digital media content. It is everywhere: the home page, the newscasts, the job site, the podcasts, and the YouTube channel. There is a very strong presence on the web, and the content is very high quality. It does a good job of reflecting the CBC as a content provider. On the right hand side of this home page is a tag cloud of words that the audience has used to describe the CBC. The words: News Travel Work Music Technology Storytelling Entertainment There is a good variety of content in there, reflecting the breadth and depth of the CBC's content.

Q: Quadrature for MIDI notes What is the traditional way to invert a MIDI note? The more traditional note chart I see is a straight line from octave to octave, so all notes in the same octave are the same pitch. For example, C is C, D is D, E is E, and so on. This has the advantage of consistency for the note-color however a drawback is that many non-Western notes will have the exact same sounding pitch. I know there are ways to do this with pre-digital tuners. How do pre-digital tuners deal with a piano tuned using a digital tuner? A: When using a software piano or a virtual piano, the same note may sound different depending on how it is played. That could happen if you are using a different octave for the playing than the composer had in mind. In reality, most people would play the same note at the same octave as the composer, which means they would be satisfied with a 'C' in the first octave and a 'D' in the second. A: This question has a few assumptions that I will identify. First, let's figure out whether the composer really wanted a different note. If the composer is using an organ, then there would be a loud and soft pedal that inverts both the pianist and the organist. (Or there might be no pedals at all: a grand might have no pedals; one might have tone and sustain pedals.) In any case, there should be a "correct" position, and that should be supported. (Cleaning the chords, for example, might cause the piano to lose some volume. But if you really need low volume, then you might get away with producing a thicker low end than is required by the composer.) I think your question is really: How should one set up the piano sound? There is one non-standard option I can think of: hum. Let's say you have the left and right channels muted. Then, you would play the chord with the left hand, while simultaneously playing an artificial note with your right hand, which sounds a note that is one octave down. I think this would produce a reasonable result, providing: the artificial note played with the right hand is loud enough, (a reference to the volume of the left hand) it is clear that you
