Photoshop Tutorial 1. Create a New Document Open the program and create a new document (Ctrl+N). 2. Create a New Layer Create a new layer (Ctrl+Shift+N). The new layer is the first one in the stack and you're likely to set it as the foreground layer in Photoshop. It's the layer that currently shows in the Layers palette, which gives you access to a variety of tools and functions. 3. Create a New Layer Add a new layer (Ctrl+Shift+N). 4. Add an Image to the Layer Use the button in the Layers palette to select the image you want to add (the source image). When you select an image it turns black as you select it, then changes to the color of the selection. 5. Delete a Layer Click the layer you want to delete and press Delete (Cmd+Delete, Cmd+Backspace, etc.). 6. Select the Layer Click the button in the Layers palette and select the layer you want to manipulate. 7. Select Multiple Layers You can select multiple layers in the Layers palette. To select all the layers, press Ctrl+A. To select a range of layers, use the up and down arrow keys to select the range of layers, and press Enter. 8. Select the Background Layer If you'd like to work on a layer other than the active layer, which is the top layer (the layer with the most information), click on the background layer in the Layers palette and press Enter. 9. Erase a Layer Use the Eraser tool to remove some pixels from the image. Press (Erase, Erase All), or simply press the Eraser tool to erase the pixels. 10. Fill a Layer Use the Paint Bucket tool to fill the layer with the color you choose. 11. Choose a Layer Mask A layer mask is a second layer with a black-and-white style background that can be used to hide or reveal underlying layers. Use the Layer Mask tool to add a layer mask, or use the option in the Layers palette to do so. You can turn the visibility of the mask on and off by clicking the button, or press the mask icon in the Layers palette.

Similar Software Photo editing software differs from one photo editing software to the next. Some feature powerful tools to edit just about any photo, while others are dedicated tools for just one kind of photo editing. Most photo editing software runs on Windows PCs and Macs. There are specific image editing software programs for mobile devices as well. There are photo editing software programs that are capable of giving you results similar to Photoshop, Paint Shop Pro or Elements. Here's a list of photo editing programs that are similar to Photoshop. Editor's Choice Price: Starting at $30.00. Interface: The easiest to learn of the programs on this list. It's the only one where opening a new image file automatically brings up the editing tools for that image. Auto-Enhance: Fairly easy to use once you learn the interface. Edit Like a Pro: It's a bit hard to find the best tools for every type of photo editing you need to do. Supported Platforms: Windows, Mac, Linux, iPad, and Android. Advanced Features: There are some tools designed to edit videos. Price: Starting at $50.00. Interface: It doesn't have a menu system, which may be confusing to users who don't understand menus. A tutorial is included in the help file, but it doesn't explain too much, and it's not a beginner's guide. Auto-Enhance: While it doesn't have a full-featured noise reduction tool, it can remove unwanted background objects from an image. If you're looking for perfect results, this isn't the best. Edit Like a Pro: The editing tools are more varied than those in Elements and it has more than those in Elements. Supported Platforms: Windows, Mac, Linux, Android, and Kindle. Advanced Features: You can create your own presets that are stored as a new file type. Price: Starting at $50.00. Interface: The menus are hard to find. With every menu entry, it takes one to two steps to get to the feature you're looking for. Auto-Enhance: Fast and easy to use. Edit Like a Pro: Editing and color corrections are easier to perform than in Elements. The program has some powerful features, like blending tools, in the advanced edition. Supported Platforms: Windows and Mac. Advanced Features 05a79cecff

Q: Submitting a form in Backbone View 1.0 How can I submit a form in my View in Backbone? The submit function doesn't seem to exist in backbone? I'm trying to follow the patterns set out in the docs, but am struggling to find my way. I have a template, a model and a view. var Post = Backbone.Model.extend({ defaults: { content: '', image: '', id: undefined, date: '', username: '', user: undefined } }); var ImageView = Backbone.View.extend({ initialize: function(){ this.model.bind('destroy', this.deletePost, this); }, events: { 'click.delete': 'deletePost', 'click.save':'savePost' }, // This doesn't seem to work properly? savePost: function(){ var p = new Post(); p.set({ image: this.model.attributes.image.src, username: this.model.attributes.username, content: this.model.attributes.content, id: this.model.id, date: this.model.attributes.date, user: this.model.attributes.user }); p.save(); }, deletePost: function(){ this.model.destroy(); } });

When you load an image into Photoshop, the first action you take will be to load it into your image file, usually in RGB mode. Here is a guide on how to load an image into Photoshop in RGB mode. The next step, depends on what you are going to do. For example, if you are going to clean-up and retouch the image, you may want to convert it to grayscale (the colors in the image will be black and white). To convert an image in RGB to grayscale mode, do the following: - Click on the RGB swatches at the bottom of the image view - Click the "Grayscale" swatch - Click the image - Now load the image into Photoshop - Your image will now be in grayscale mode - To make the image look great, I recommend doing retouching in the grayscale mode. The next step is to color correct the image. Generally speaking, the human eye has three color receptors, which are red, green and blue. These three colors are the primary colors that make up all other colors and are responsible for making all colors look the way they do. Two of the primary colors are the red and blue, and these are the other two colors that Photoshop uses to color correct your images. To change the colors in an image, you need to set the RGB image to the sRGB or Adobe RGB modes. In Adobe RGB mode, Photoshop's default color setting, everything will be lit up with the brightest, most colorful colors. For people who have burning eyes, switching to the sRGB is the best way to go. Here is a guide on how to color correct an image: - Click the "Color" option at the top of the image - Click the Color Settings icon - Click the Color Settings link on the left - Click the Saturation tab at the top right of the Color Settings box. - Click the green arrow until you see -"Saturation: 100%", then drag the red square to the right to see -"Saturation: 0%" - Click the red arrow to open the Curves window - Click and drag in the gray boxes on the Curve to adjust the way your image looks - Click the blue arrow to close the window - The brightness of the colors in your image will now be much brighter To convert an
